ideas, paragraphing & number of sentences	outlining	Spelling & Structure	Handwriting, spacing & punctuation	Total

## **VI- READING COMPREHENSION: ( 160 Marks )**

**Read the following passage then answer the questions below:**

How many things can you see in the night sky? A lot! On a clear night you might see the Moon, some planets, and thousands of sparkling stars. You can see even more with a telescope. You might see stars where before you only saw dark space. You might see that many stars look larger than others. You might see that some stars that look white are really red or blue. With bigger and bigger telescopes you can see more and more objects in the sky. And you can see **them** in more and more detail.

But scientists believe there are some things in the sky that we will never see. We won't see them with the biggest telescope in the world, on the clearest night of the year. That's because they're invisible. They're the **mysterious** unknown dead stars called black holes.

You might find it hard to imagine that stars die. After all, our Sun is a star. Year after year we see it up in the sky, burning brightly, giving us heat and light. The Sun certainly doesn't seem to be getting old or weak. But stars do burn out and die after billions of years.

As a star's gases burn, they give off light and heat. But when the gas runs out, the star stops burning and begins to die. As the star cools, the outer layers of the star pull in toward the center. The star squashes into a smaller and smaller ball. If the star was very small, the star ends up as a cold, dark ball called a black dwarf. If the star was very big, it keeps squashing inward until it's packed together tighter than anything in the universe.

Imagine if the Earth were crushed until it was the size of a **tiny** marble. That's how tightly this dead star, a black hole, is packed. What pulls the star in toward its center with such power? It's the same force that pulls you down when you jump — the force called gravity. A black hole is so tightly packed that its gravity sucks in everything — even light. The light from a black hole can never come back to your eyes. That's why you see nothing but blackness. So the next time you stare up at the night sky, remember: there's more in the sky than meets the eye! Spread in the silent darkness are black holes — the great mystery of space.

**A) Choose the correct answer from a , b , c and d:**

**( 6x 15= 90 Marks )**

31. The best title for the passage would be .....
- The force of gravity
  - Uses of telescopes
  - Dead stars
  - Great scientists

32. The underlined word "**mysterious**" in the 2<sup>nd</sup> paragraph is closest in meaning to .....
- familiar
  - strange
  - clear
  - common
33. The pronoun "**them**" in the 1<sup>st</sup> paragraph refers to .....
- stars
  - telescopes
  - objects
  - planets
34. The main idea of the last paragraph is .....
- How a dead star is packed
  - How stars are scattered in the sky
  - What makes the sky clear at night
  - What makes a star burn
35. The opposite of the underlined word **tiny** in the 5<sup>th</sup> paragraph is .....
- bright
  - clumsy
  - small
  - huge
36. Dead stars can't be seen by telescopes because .....
- they are scattered in the sky
  - they are invisible
  - of the gravity
  - thousands of stars are sparkling

**B) With reference to the passage, answer the following questions: ( 3x10 = 30 Marks )**

37. Why can we see only blackness in the sky?

.....

38. How is the star pulled in towards its centre?

.....

39. How do stars give off light and heat ?

.....

**C) Summary Making****( 4X10= 40 Marks )**

In not less than four sentences, summarize the 4<sup>th</sup> paragraph in an answer to the following question :

**"How does a star die?"**

.....

.....

.....

.....

.....

.....

**VII- Translation ( 40 Marks )**

**A) With reference to the passage ,translate the following sentences into good Arabic :**  
**( 30 Marks)**

You might find it hard to imagine that stars die. After all, our Sun is a star. Year after year we see it up in the sky, burning brightly, giving us heat and light. The Sun certainly doesn't seem to be getting old or weak. But stars do burn out and die after billions of years.
