VI- Reading comprehension (110 Marks)

Read the following passage carefully, then answer the questions below:

Over the past 20 years, scientists have been producing genetically modified (GM) foods by modifying, or changing, the genes of plants and animals. Genes are the codes in the cells of living things that determine the way **they** look and grow. In humans, genes determine characteristics such as the colour of our eyes and how tall we are. By changing the genes of plants, scientists can cause crops to produce more, become resistant to pests and disease, and have more nutritional value. Genetically modified plants can have great benefits by increasing food supplies, protecting the environment, and even improving nutrition.

The world's population is expected to <u>exceed</u> over 8 billion by 2025. Unfortunately, food production has decreased over the last ten years. As it is, some 40,000 people die from hunger-related causes every day. The only way to increase food production seems to be through technology, since land and water are getting scarce. If GM food crops could be developed to resist droughts or grow in poor, dry, or salty soils, this would help poorer countries.

GM crops can protect the environment because they are kinder to nature. Many farmers today depend on chemicals such as pesticides, herbicides, and fertilizers to make their crops grow. The most common GM crops grown at the moment are those that resist herbicides. The second most common are those crops that kill pests. Some crops have been grown with both these genes. This is better for the environment because it reduces the need to spray fields with pesticides and fertilizers.

Genetically modified crops may make food more nutritious by adding genes to produce more vitamins that the body needs for health and growth. For example, a kind of rice called golden rice has been genetically modified to contain vitamin A. Regular rice does not have vitamin A, and some people who live mostly on rice are missing this important vitamin. This new rice can make a big difference to those people. GM vegetables of the future may be produced with added nutrients to help fight heart disease and cancer.

The United States grows 75 percent of the world's GM Crops. More than 40 percent of the corn, 50 percent of the cotton, and 45 percent of the soyabeans grown in the United States in 1999 were genetically modified. Are GM foods safe for our health and the environment? So far, there is no evidence that GM foods have any risks, but only time and more research will tell.

A- From a, b, c and d choose the suitable answer: $(5 \times 10 = 50 \text{ Marks})$

- 28. The best title for the passage could be:
- a. Nutritional Food
- b. The Cost of GM Food
- c. The Need for Food
- d. The Benefits of GM Food

الصفحة السابعة المجال الدراسي: اللغة الإنجليزية امتحان الصف الثاني عشر. نهاية الفترة الدراسية الأولى رتجريبي، 2018/ 2019

- 29. The underlined pronoun "they" in paragraph (1) refers to:
- a. plants and animals
- b. genes and codes
- c. modified foods
- d. living things
- 30. The underlined word 'exceed' in paragraph (2) means:
- a. go beyond
- b. be equal
- c. reach
- d. excel
- 31- Which of the following is **Not TRUE** about the GM foods?
- a- They resist pests and diseases.
- b- They have more nutritional value.
- c- They cause damage to the environment.
- d- They increase food production to feed more people.
- 32- The highest percentage of GM crops in the USA is:
- a- rice
- b- corn
- c- cotton
- d- soyabeans

B- Answer the following questions: (4 x15=60 Marks)

- 33. How can GM crops be beneficial to poor countries?
 - If GM food crops could be developed to resist droughts or grow in poor, dry, or salty soils, this would help poorer countries.
- 34. Why do farmers use chemicals?
 - Many farmers today depend on chemicals such as pesticides, herbicides, and fertilizers to make their crops grow.
- 35. How is golden rice better than regular rice?
 - It contains vitamin A which is not found in regular rice.
- 36. What shows that the writer finds GM food to be safe for our health and the environment? So far, there is no evidence that GM foods have any risks, but only time and more research will tell.

VII- Summary Making(60 Marks)

Read the following passage carefully, then answer the question below:

It can be hard for some animals to find food during winter. They get through it in many ways. Birds and butterflies fly to a place with nice weather. Then they come home in the spring. We call this migration.

Another way to avoid the cold is to sleep through it. Many animals hide during the winter. They save their energy. They do not eat. They do this until food returns. We call this hibernation. Snakes, frogs, and bears hibernate.

Some animals store food in their homes. They live on what they saved in the summer and fall. This is what squirrels, beavers, and raccoons do.

Other animals adapt themselves to the weather. They do not leave. They do not hide. They must survive. Sometimes nature helps them out. Some animals grow thicker coats in the winter. Other animals change colour. The arctic fox is brown in the summer. His coat turns white in the winter.

In four sentences of your own, summarize and paraphrase the above passage in answer to this question: (4X15=60 Marks)

How do animals and birds survive the cold winter?

Birds migrate to places where the weather is nice. Animals like snakes and bears hibernate during winter to save energy. Other animals, such as squirrels and raccoons live on what they have stored in summer. However, some animals adjust themselves to the hardships of the cold weather.

	Content / relevance of	Content / relevance of Paraphrasing Spelling and		Format	Total
rics	ideas		grammar		
Rub	30	20	5	5	60

- Copying the whole paragraph receives ZERO.
- Exceeding the required number of sentences
- (Minus 5 marks for one sentence- Minus 10 for two sentences and above)
